Challenge : Magic 8 Ball

Create an application that will prompt the user to ask a question...

the application will then output (randomly) one of the following responses.

- As I see it, yes.
- Ask again later.
- Better not tell you now.
- Cannot predict now.
- Concentrate and ask again.
- Don't count on it.
- It is certain.
- It is decidedly so.

Hints :

Use the **Scanner** to input the question from the user.

Use the **Random** class to a random number from 1 to 8.

Use that number to select the response (use a **switch** statement for that).

Example output...

```
What's your question ?            What's your question ?
Will Man Utd get relegated this year   Will Trump be re-elected
You want to know ...              You want to know ...
Will Man Utd get relegated this year   Will Trump be re-elected
As I see it, yes                  Cannot predict now
```
